

Liftoff X — Pitch Deck Outline

B2B crash game for casino operators & aggregators. Aviator-class gameplay + a social/retention layer + operator-friendly economics. Use this as the script for a 10-12 slide deck (Pitch/Google Slides/Figma). The live MVP is the demo. Numbers in slide 7 come from `OPERATOR-ECONOMICS.md` — keep the two in sync.

Slide 1 — Title

- **Liftoff X** — The crash game operators actually earn from.
- One line: "Aviator-class instant game with a built-in social layer and a revenue model that gives operators more margin."
- Live demo link + your contact.

Slide 2 — The problem (for operators)

- Instant/crash games are now a **top-3 revenue category**, but supply is concentrated in a few providers (Spribe/Aviator, etc.).
- Operators face: **high fixed rev-share**, **fixed RTP** they can't tune to their market, **generic UX**, and **little differentiation** vs every other casino running the exact same game.
- Result: a hit game, but thin operator margin and zero brand ownership.

Slide 3 — The solution

- **Liftoff X**: a provably-fair crash game that is
 - **Aviator-class** on gameplay & feel (dual bets, auto-cashout, live rounds),
 - **Social by design** — leaderboards, live activity feed, profiles, chat → higher engagement & retention (more rounds = more GGR),
 - **Operator-friendly** — configurable RTP, better rev-share, white-label skin.

Slide 4 — Product / demo

- Screenshots + **live link** (the MVP).
- Highlights: shared server-authoritative rounds, **provably fair** (player can verify any round), **dual simultaneous bets**, auto-cashout, multi-language, mobile-first PWA, live players + activity feed.
- "Everyone who opens it is in the same live round" — true multiplayer.

Slide 5 — Why now

- Instant/crash games went from niche to mainstream post-Aviator; double-digit YoY growth in emerging + regulated markets.
- Operators are **actively seeking alternatives** to diversify away from a single dominant supplier and to own more of the player relationship.

Slide 6 — Differentiation (vs the incumbent)

	Incumbent (Aviator-style)	Liftoff X
RTP	Fixed (≈97%)	Configurable (97/96/95%) per market
Rev-share	High, flat (~15%)	Lower + volume-tiered
Retention	Basic	Social layer (leaderboard, feed, profiles)

	Incumbent (Aviator-style)	Liftoff X
Branding	Provider-branded	White-label / "powered by operator"
Fairness	Provably fair	Provably fair + certified-RNG roadmap

Slide 7 — Business model & operator economics

- Model: % of **GGR** (volume-tiered), or flat-fee option for high-volume.
- Headline: at the same player base, the operator keeps more under Liftoff X.
- Pull 2-3 numbers straight from [OPERATOR-ECONOMICS.md](#) (e.g. "per 1,000 active players/month the operator keeps **€X more** than under a 15% incumbent deal").
- Show the tiered staffel + the "better-for-operator" comparison table.

Slide 8 — Go-to-market

- **You don't integrate 5,000 operators one by one.** Distribution = aggregators.
- Phase 1: certify + list on **2-3 aggregators** (EveryMatrix/Hub88, SoftSwiss, Slotegrator, Pariplay, Oryx/Bragg) → instant reach to thousands of operators.
- Phase 2: direct deals with tier-1/2 operators who want a custom skin.
- Phase 3: branded tournaments/jackpots network across operators.

Slide 9 — Traction & roadmap

- **Now:** MVP live & shareable (provably fair, social, dual bets, multiplayer).
- **Next:** RGS + seamless wallet API → certification (GLI/iTech) → B2B license → first aggregator listing → first operators live.
- Show a dated timeline; mark the licensing/cert milestones explicitly.

Slide 10 — Compliance & tech

- Architecture: **RGS (Remote Game Server)** + thin client; **seamless wallet API** (operator holds the balance).
- Provably fair today; **certified RNG (GLI-19/GLI-11)** for regulated markets.
- Responsible-gaming hooks, audit logs, reporting, multi-currency, HA/low-latency.

Slide 11 — The ask

Two routes — be explicit about which one you're pitching. Full detail + cost ranges in `FUNDING.md`. Figures are estimates, not quotes.

- **Route B — JV / "Powered By" (capital-light):** partner with an already-licensed studio that brings the licence, certification and aggregator connections.
 - **Ask:** a partnership, not cash. Cost to you = a share of revenue, ~€0 upfront.
- **Route A — Own studio (the real raise):** fund licensing + certification (the long pole) and a production-ready RGS.
 - **Ask: €150k-400k over 6-18 months.**
 - **Use of funds:** RNG certification (GLI-19/iTech, ~€15k-50k/market) · B2B supplier licence (~€10k-60k) · RGS hardening + wallet API (~€30k-100k) · legal/ compliance + buffer (~€20k-50k).
 - **What it buys:** a certified, licensed, integration-ready game listed on 2-3 aggregators → reach to thousands of operators.
 - **Timing note:** raise after 2-3 operator/aggregator LOIs — validation lifts the valuation and cuts dilution.

Slide 12 — Team & contact

- Founders/experience, advisors (esp. anyone with iGaming/compliance background).
- Contact + live demo link.

Appendix (back-pocket slides)

- Full math/RTP & volatility model.
- Detailed integration/wallet API spec.
- Certification & licensing cost/time table.
- Competitive landscape map.
