

Liftoff X

The crash game operators actually earn from.

Aviator-class instant game · built-in social layer · operator-friendly economics.

Live demo: www.liftoffx.com · www.liftoffx.com/operators · stefanolijve85@gmail.com

Game at a glance

Type	Crash / instant game (multiplier — cash out before the bust)
RTP	Configurable — 97% / 96% / 95% per market
Volatility	High (provably-fair distribution, $P(\geq X) \approx 0.98 / X$)
Max win	Uncapped by design (configurable cap per operator)
Bets	Dual simultaneous bets + auto-cashout per bet
Fairness	Provably fair (HMAC-SHA256, player-verifiable) + certified-RNG roadmap
Multiplayer	Server-authoritative shared rounds — everyone in the same round
Platform	Mobile-first web / PWA · multi-language · multi-currency

Why it's different

- **Configurable RTP** — tune the house edge to each market (incumbents ship fixed RTP).
- **Better, volume-tiered rev-share** — operators keep more margin.
- **Social / retention layer built in** — leaderboard, activity feed, profiles, chat → more rounds/player → bigger GGR.
- **White-label / "powered by operator"** skinning — you own the brand, not us.

Commercials (indicative — tuned in conversation)

- Model: % of **GGR**, volume-tiered (e.g. 14% → 10% → 7% as GGR grows), or flat-fee at high volume.

Operator keeps more: vs a 15% fixed deal, ~+€3,400 / month per 1,000 active players stays with the operator — before the retention uplift grows the pie.

Integration

- **RGS (Remote Game Server)** + thin client; **seamless wallet API** (you hold the balance). Via aggregator or direct.
- Multi-currency, responsible-gaming hooks, audit logs & reporting out of the box.
- Certification roadmap: **GLI-19 / GLI-11** (RNG) for regulated markets.

Status

- **MVP live & playable** — provably fair, dual bets, social layer, real multiplayer.
- **Next:** RGS + wallet API → certification → B2B licence → aggregator listings.
